

Demountable Equipment Pre Trip Inspection

- Body or bodies locked on properly - visually check each set of locking hooks
- Each safety lockout key is correctly in place
- Locking alarm light and buzzer are off
- All body legs are secured and pinned in place
- All body and chassis lights are working

Demountable Equipment Post Trip Inspection

- Body or bodies are demounted at proper height
- Body or bodies are demounted straight with dock and/or other bodies
- Does chassis lift run up and down smoothly
- Does the lock warning system(s) operate properly
- Are the light plug(s) in tact and working properly
- All upper and lower leg pins are present and secured

- I detect no defect or deficiency in the demountable equipment that would likely affect the safety of its operation
- I detect the following defects or deficiencies in the demountable equipment that would likely affect the safety of its operation

Indicate below whether defects are on chassis lift, body or trailer chassis - Use sufficient detail to locate for mechanic.
